

Positive Pressure Tube Ventilation (PPTV systems)

1803 Agricultural Ventilation designs are based on science provided by the University of Wisconsin-Madison and supplies a bespoke tube ventilation system, that incorporates a range of factors including type, age and number of livestock, along with the dimensions of building and its location.

Benefits

- Positive air movement
- Simple installation
- Fitting service available
- Air distribution to the animal's immediate environment
- Drier beds
- Low running costs
- Reduces buildup of ammonia and microorganisms.

Research has shown that Positive Pressure Tube Ventilation (PPTV) provides a significant improvement in air quality, reducing risk of respiratory disease.

Our PPTV systems are supplied by selecting the most appropriate products from a number of quality suppliers in the UK and Europe to make sure you get the correct and best suited system for your livestock building.
